

OVRDRIVE SIM CATALOG

A self-serve car & track reference for Full Throttle Adrenaline Park's racing simulators — built for the lobby TV and for guests' own phones.

Prepared 7 Jul 2026

Status — in active use

Platform — static web, no backend

OVERVIEW

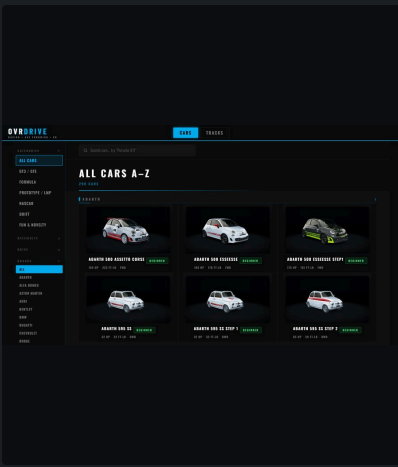

Guests picking a car or a track today have to ask a staff member, or just guess — there's no way to see the full lineup before or during a session. The Sim Catalog fixes that with a single reference that lives where guests already are: a screen in the lobby, and a QR code they can scan on their own phone.

It was built to match how this venue actually runs — no accounts, no app install, nothing for staff to maintain beyond editing a page. It's already live and being used; this proposal is about what it would take to make it a supported, permanent part of the venue's guest experience.

WHAT IT DOES

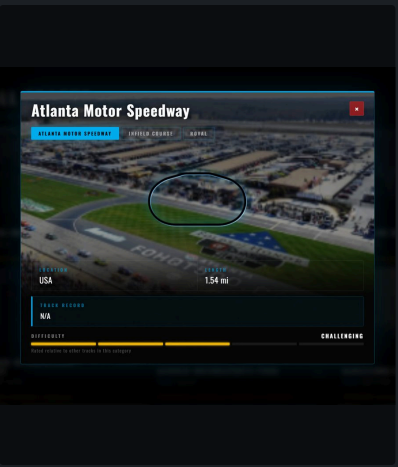

- Full car roster, filterable by brand and by difficulty / drivetrain cars
- Full track roster — 109 tracks — with tap-to-preview layout and outline maps tracks
- Live search across both tabs — type a make, model, or track name for instant results search
- Mobile-first layout with collapsible filters, for guests browsing on their own phones mobile
- Runs as a static site — no server, no database, simple to stand up and keep updated infra

IN THE VENUE

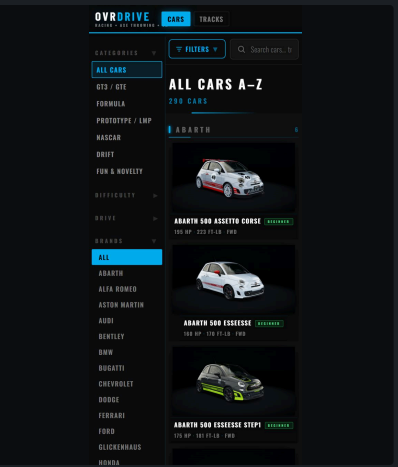

Desktop — Cars tab

Brand + difficulty filters

Desktop — Track modal

Layout & difficulty preview

Mobile — filters open

Collapsible sidebar, built for phones

ACCESS POINTS

LOBBY TV DISPLAY

Looped on the lobby screen so guests can scan while they wait.

PRINTED HANDOUT / POSTER

Print-ready version for counter cards, handouts, or wall posters.

NEXT STEPS

This is a working tool already, not a concept — the open question is what it looks like to formalize it: ongoing ownership, rollout to other locations, and licensing terms. Raising this now, ahead of that conversation.
